Dear next and future LWSP interns,

In my time with LCFM I was able to continue some of the work the previous intern had started. This continues the installation process of the Fixed-point photo station. The one I was able to install was the Eagle Point Public Fishing Pier.

As the winter intern I completed lots of GIS projects in ArcPro. This included maps of Cover Crop field in 2024, a PCB spill site map, an FPPS map, and the biggest one was finding fields for the TRM grant in 2025. Lots of files that I have made have been moved around to different folders so they can be easier to find.

A big project I had a hand in helping with is the outreach for TRM grant. IN making the map I had to identify field within the selected watersheds, identify the owners and record their address and acreage. This then created the mailing list for the grant. The final part I played in this project was writing the draft of the outreach letter.

I only spent a short time here. I started in January and left in April for a full-time position, but the skills and knowledge I learned here will have a massive impact in my future career. Being able to experience the county conservation side of things has been very rewarding.

You're going to have so much fun, relax and make sure to take the time to enjoy this experience!

-Emily Lee (Winter '25 LTE)
